

PARTH
PRODUCTION
SOUND | LIGHT | TRUSS | SFX

COMPLETE SYSTEM GUIDE

Your complete guide to the Parth Production system

A simple walkthrough of how the office and the field stay connected — from booking an event to returning the gear.

Made for real event work

Sound, lights, truss, SFX, weddings, baraats, corporate shows, and festivals — managed in one calm, clear place.

Two sides, one system

Admin runs the business. **Staff** run the ground. Both stay in sync.

What is this system?

Think of it as the digital control room for Parth Production. It replaces scattered notebooks, chats, and spreadsheets with one shared workspace.

In one sentence

It keeps events, equipment, people, money, and invoices together — so nothing important gets lost between the office and the venue.

BEFORE

Scattered work

Orders in messages. Stock in memory. Invoices in files. Staff unsure what to do next.

NOW

One shared place

Everyone opens the same system. Live stock. Clear tasks. Clean invoices. Instant updates.

RESULT

Fewer surprises

Less double-booking, fewer missed returns, clearer money, happier clients and crews.

What it helps you manage

- Client bookings and event details
- Equipment list and how much is free on a date
- Assigning staff and teams to shows
- Checking gear out and bringing it back

- Payments, advances, and money still due
- Professional invoices with company branding
- Staff accounts and access control
- Alerts when something important happens

Who uses it?

There are two clear roles. Each person only sees what they need — so the screen stays simple and safe.

ADMIN

Business owner / manager

Runs the full operation from booking to final payment.

- Create and manage events
- Control inventory and categories
- Assign people and teams
- Track money and send invoices
- Add or remove staff accounts
- Set company logo, tax, and email settings
- Approve staff email-change requests

STAFF

Field / warehouse team

Focuses on assigned shows and equipment movement.

- See personal dashboard
- Open “My Tasks” for assigned events
- Mark setup as done
- Scan gear out, return it, or mark damage
- Get notifications for new assignments
- Change own password
- Request an email change (needs admin approval)

Staff never see business money screens, full inventory editing, or company settings — by design.

On a phone or computer

The same system works in the office and on site. Staff can scan barcodes with a phone camera.

Light or dark look

Everyone can choose a light, dark, or automatic theme — useful for bright warehouses or night setups.

The big picture — how work flows

Every event follows a simple path. The system guides each step so the team always knows what comes next.

A day in the life

- Morning in the office**
 Admin checks the dashboard, creates today's bookings, and confirms which gear is still free.
- Crew gets ready**
 Staff open My Tasks, see their venues, and prepare for load-out.
- At the warehouse**
 Items are scanned out to the correct ongoing event — no guessing which show owns which case.
- On site**
 When setup is finished, staff tap "Mark Setup Done." Admins get an alert instantly.
- After the show**
 Gear comes home through Scan. Payments are logged. The invoice shows what is paid and what is still due.

Admin side — the full toolkit

Everything a manager needs to run Parth Production from booking to balance sheet.

-
- **Dashboard**

Quick counts for active events, gear currently out, upcoming work, and team size — plus a fast path to create a new order.
-
- **Inventory & Categories**

Full equipment catalogue with quantities, barcodes, and status. Organise items in clear groups. Check how much stock is free on any chosen date. Print barcode labels.
-
- **Orders & Manage Order**

Create bookings with client details, event type, dates, addresses, amounts, and advances. Reserve gear, assign people, move status from upcoming to ongoing to completed.
-
- **Finance & Invoices**

See income, expenses, dues, and profit. Add money entries. Produce print-ready invoices with company branding and optional GST. Share a secure invoice link with the client.
-
- **People — Employees & Teams**

Add staff, reset access, activate or deactivate accounts. Build named crews so assigning a whole team to an event takes seconds.
-
- **Settings & Requests**

Upload the company logo, set GST details, configure outgoing email, turn staff scanning on or off, and approve email-change requests.
-

Money privacy tip

On order and finance screens, amounts can be hidden with one tap — handy when someone is looking over your shoulder.

Staff side — focused and fast

Field teams get a clean set of tools. No clutter. Just the work that matters on the ground.

MY TASKS

Know your shows

See assigned events with date, time, client, and address. Jump to scanning. Mark setup complete when the stage is ready.

SCAN ITEM

Move gear with confidence

Three clear actions: move to event, return to stock, or mark damaged. Type a barcode or scan with the phone camera.

ALERTS

Never miss an update

Get notified when you are assigned to a show, when something changes, or when your account needs attention.

ACCOUNT

Stay secure

Change your password anytime. Request an email change — an admin must approve it before it finishes.

Scan Item — the three actions

1. Move to Event

Pick an ongoing show, scan the item, and it is checked out to that event.

2. Return to Stock

When gear comes home, scan it back so inventory shows as available again.

3. Mark Damaged

Flag broken equipment so it is not booked for the next client by mistake.

If scanning is turned off in Settings, staff simply will not see that screen — useful during quiet seasons or training.

Step-by-step journeys

Common tasks explained like a friendly checklist — no special knowledge needed.

Create a new staff member

1. Admin adds name, email, phone, and a temporary password.
2. The new person receives a verification code by email.
3. They verify the email, then log in.
4. They must set their own password before starting work.

Book an event

1. Admin creates an order with client and event details.
2. Reserve the equipment needed for that date.
3. Assign individuals or whole teams.
4. Move the event to Ongoing when work begins.

Share an invoice

1. Open the invoice from the order.
2. Print it, or share a message with totals and a private link.
3. The client opens the link and proves their email with a one-time code.
4. Only then can they view the invoice amounts.

Forgot password

1. On the login screen, choose Forgot password.
2. Enter the account email.
3. Enter the one-time code from the inbox.
4. Choose a new password and sign in again.

Staff email change (safe two-step)

Because email is how people sign in, changing it is carefully controlled:

- Staff submit a request.
- Admin approves or rejects it.
- If approved, the person confirms with codes, current password, and the new inbox.
- Only after that does the login email switch.

Branding, messages & helpful extras

Small touches that make the system feel like Parth Production — not a generic tool.

Your logo everywhere that matters

Once uploaded in Settings, the company logo appears on the login screen, side menu, invoices, emails, and the phone home-screen icon.

Emails that keep people moving

The system can send verification codes, password reset codes, welcome notes, invoice emails, and email-change confirmations — once outgoing email is set up in Settings.

WhatsApp & call shortcuts

From finance and invoice screens, you can quickly message or call a client with the right totals and links — less copy-paste, fewer mistakes.

GST-ready invoices

Store your GST number and rate once. When an order is marked as a GST invoice, the bill includes the tax line automatically.

Works like a phone app

Add it to a phone home screen for a full-screen experience, large buttons for warehouse use, and camera scanning when hands are full.

Indian event types

Wedding, Baraat, Corporate, Festival, and Other — labelled the way the team already speaks.

Rupee formatting

Money is shown in a familiar Indian style so totals are easy to read at a glance.

Notifications bell

Unread alerts stay visible until you clear them — assignments and setup updates never hide.

Safety & trust — in plain words

You do not need to be technical to care about safety. Here is how the system protects the business and its people.

- ✓ **Sign-in required.** The dashboard is private. Guests cannot wander in.
- ✓ **Different roles see different things.** Staff cannot open money or company settings.
- ✓ **Passwords are protected.** Even admins cannot read someone's password back.
- ✓ **New accounts must prove email ownership** before they become active.
- ✓ **One-time codes expire.** Reset and verification codes work once and only for a short time.
- ✓ **Too many wrong tries slow attackers down** and may ask a simple security check.
- ✓ **Public invoices stay gated.** Clients must prove they own the right email before seeing amounts.
- ✓ **Inactive staff cannot log in.** Access can be switched off in seconds.
- ✓ **Email changes need strong proof** — password, codes, and for staff, admin approval.

Why this matters for Parth Production

Your client list, pricing, and equipment list are business assets. This system keeps everyday work fast while making casual snooping and account takeovers much harder.

Quick reference — where to click

A simple map of the main screens. Hand this page to a new team member on day one.

Admin menu

- **Dashboard** — overview & shortcuts
- **Inventory** — gear catalogue
- **Categories** — organise items
- **Orders** — all bookings
- **Finance** — money in & out
- **Employees** — staff accounts
- **Teams** — named crews
- **Settings** — logo, GST, email, scan
- **Email Requests** — approve staff email changes
- **Scan Item** — move / return / damage
- **Change Email / Password** — account security

Staff menu

- **Dashboard** — personal summary
- **Scan Item** — if enabled by admin
- **My Tasks** — assigned events
- **Change Email** — request a new login email
- **Change Password** — update sign-in secret

Also on every signed-in screen

Notification bell · theme switch (light / dark / system) · logout

Getting started checklist

1) Upload logo · 2) Set GST if needed · 3) Connect outgoing email · 4) Add staff · 5) Add inventory · 6) Create the first order · 7) Assign a team · 8) Try a scan on a test item

One system. Office and field in sync.

From the first client call to the last returned case, Parth Production's operations guide keeps every show organised, branded, and secure.
